

Décomposition des contributions — nuit de gel 14→15 février 2025 (Baronnies)

points = stations Sencrop · contours = altitude · pivot couleur = seuil gel $-2,2\text{ °C}$

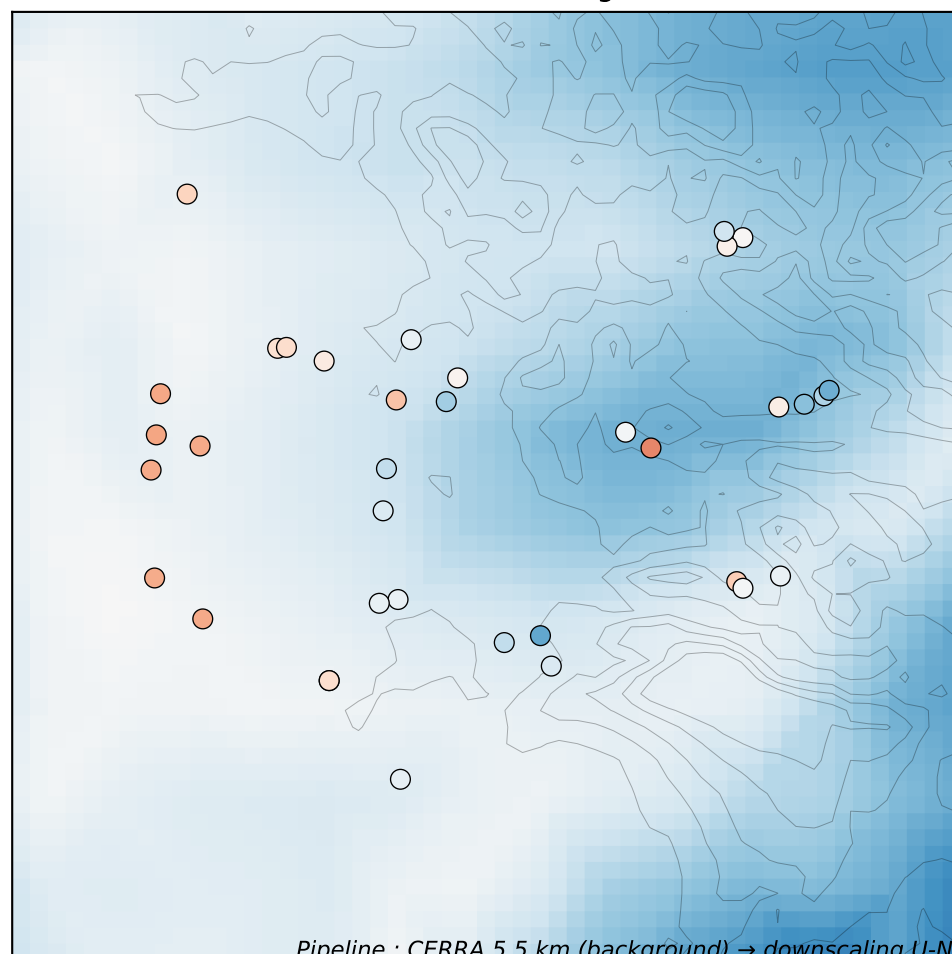

① Terrain / MNT (altitude)

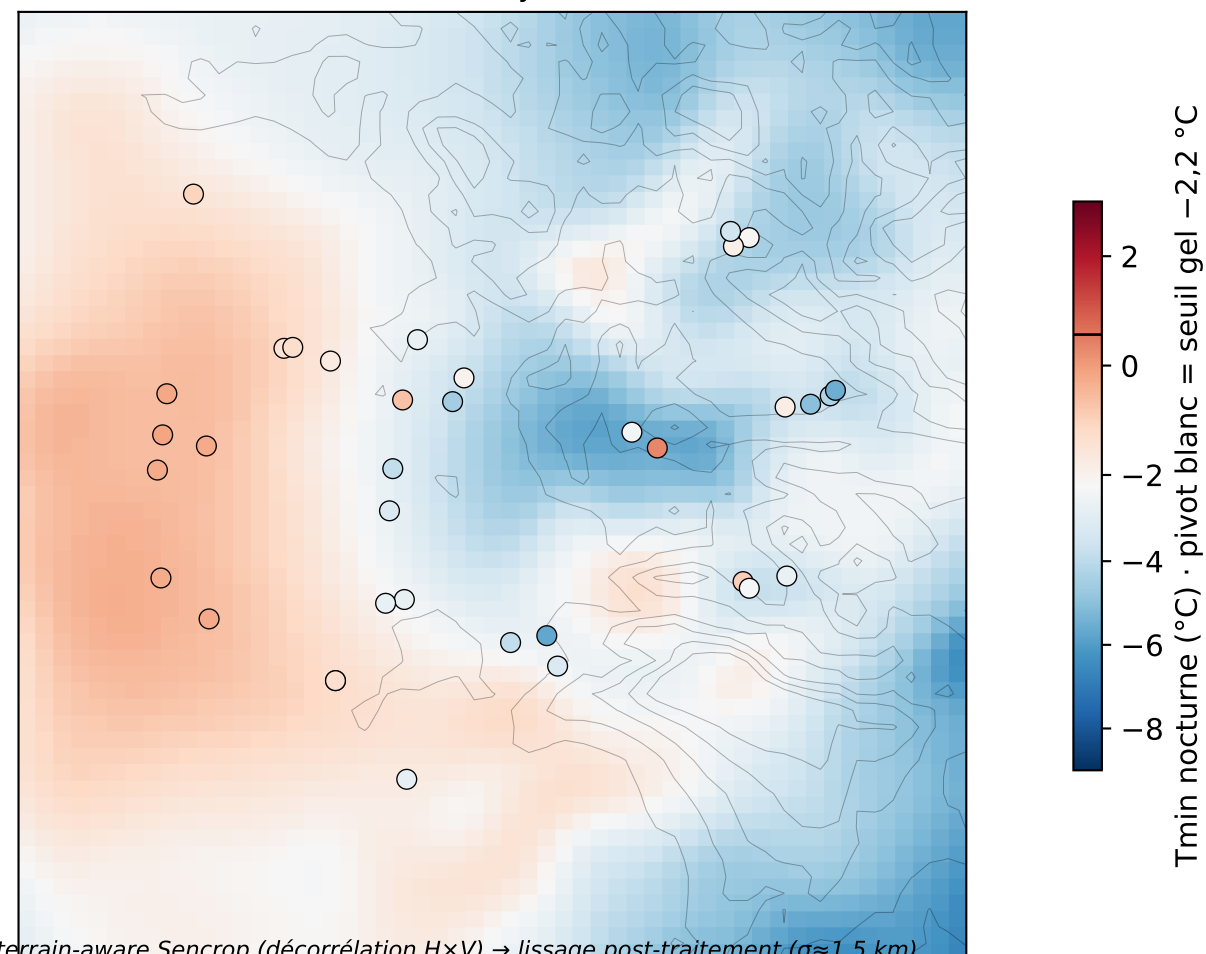

② Stations Sencrop (Tmin observé)

③ CERRA 5,5 km (background)

④ CERRA-OI (analyse assimilée)

Pipeline : CERRA 5,5 km (background) → downscaling U-Net → assimilation OI terrain-aware Sencrop (décorrélation $H \times V$) → lissage post-traitement ($\sigma \approx 1,5\text{ km}$).
